

# How To Save Your Business From Hacking

## *A quick one page checklist for business owners*

Cyberattacks often succeed because basic security steps are missed. Use this quick checklist to strengthen your business against common hacking threats.

- 1 Use strong passwords and enable multi factor authentication for all business accounts
- 2 Train employees to identify phishing emails and suspicious attachments
- 3 Keep systems, laptops, and business apps updated regularly
- 4 Back up critical business data in secure cloud storage
- 5 Limit admin access only to trusted staff members
- 6 Install endpoint protection and continuous monitoring tools
- 7 Review third party apps and vendor access permissions
- 8 Create an incident response plan before an attack happens
